 Client Tel No.: 083 436 9057

REPORT NO.: Z02020/790/0404/03

Canine Name: MOCHAVULIN MKUZE
 Breed: GOLDEN RETRIEVER
 Microchip No.: 900250000234015
 Genetic Test: PROGRESSIVE RETINAL ATROPHY – GR2
 Result: CLEAR
 Registration No.: ZA010702B16

PROGRESSIVE RETINAL ATROPHY – GR2 (PRA_GR2)

SAMPLE TYPE: EDTA BLOOD AMPULE
 EXTRACTION METHOD: DNA EXTRACTION
 TEST TYPE: SANGER SEQUENCE DETECTION

Progressive Retinal Atrophy (PRA) is a collective of genetic eye disorders that share similar symptoms. There are numerous mutations that cause PRA in various canine breeds. PRA_GR2 is a late onset PRA discovered in Golden Retrievers responsible for 30% of PRA cases.

This test detects a single adenine deletion at c.699 of the TTC8 gene causing a shift in the reading frame. PRA_GR2 is an autosomal recessive photoreceptor degenerative disease, where two copies of the mutation are required for an individual to be affected.

Downs et al 2014. A novel mutation in TTC8 is associated with progressive retinal atrophy in the golden retriever. Canine Genetics and Epidemiology 1(4).
